To Whom It May Concern:

It is my pleasure to recommend Aidan Holton for an internship position with your organization. Aidan worked with DataPath during the Summer of 2026 as part of Georgia's Partnership for Innovation (PIN) program, in partnership with North Georgia College's AI in Manufacturing course, and I had the opportunity to work with him directly throughout his time here.

During his internship, Aidan built a Software Driver Creation Tool designed to generate device drivers from manufacturer specifications, applying AI models and modern training libraries to a genuinely difficult engineering problem. This tool has already begun improving productivity for our Software Engineering team. He also significantly improved another AI tool used to detect errors in Hardware Engineering drawings. Aidan approached the project with strong technical skill, sound judgment, and a clear ability to translate complex requirements into working solutions.

What stood out most about Aidan, however, was his professional maturity. He is confident in his abilities and never hesitated to engage directly with our development team and management, asking sharp questions and contributing ideas as a full member of the team rather than an observer. He communicates his work clearly and demonstrates it effectively, whether he is walking an engineer through a technical detail or presenting progress to leadership. Just as importantly, Aidan takes direction and feedback well and consistently acts on it, incorporating guidance quickly and without ego.

Aidan would be an asset to any team looking for a driven, capable, and coachable engineer. I recommend him without reservation and am happy to discuss his work in more detail if it would be helpful.

Sincerely,

A handwritten signature in black ink, reading "Patrick J. Lentz". The signature is fluid and cursive, with a long horizontal line extending from the end.
